IMMO Thesis

The Problem

Institutional Investors Face a Yield Dilemma

Residential assets are the perfect alternative to bonds, but investable universe is minimal

- **\$18 trillion**
of capital is invested in negative yield
- **Residential > AAA bonds**
resilient, stable and inflation protected
- **Only 0.1% of €175 trillion**
global residential assets are being
invested in annually

**Investor focus on <2%
of transactions**
MFH blocks with >25m Eur
transaction size

**98% of transactions
are ignored**
SUR/SFR transactions in the
consumer market

Consumer Transaction Market is Huge, but Selling is a Pain

The market for residential transactions is enormous...

+7 million

Annual resi transactions in Europe

+€1.8 trillion

Annual resi transaction volume in Europe

Source: ECB Europe, covers total transactions in EU27 countries including UK.
Assumes average transaction size of EUR250,000

...still selling is uncertain...

69%

of home sales fall through due to buyer related reasons

39%

due to changing personal preferences of consumer buyers

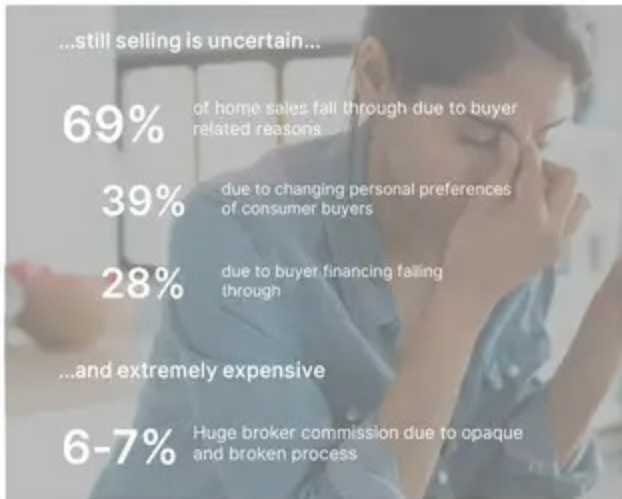

28%

due to buyer financing falling through

...and extremely expensive

6-7%

Huge broker commission due to opaque and broken process

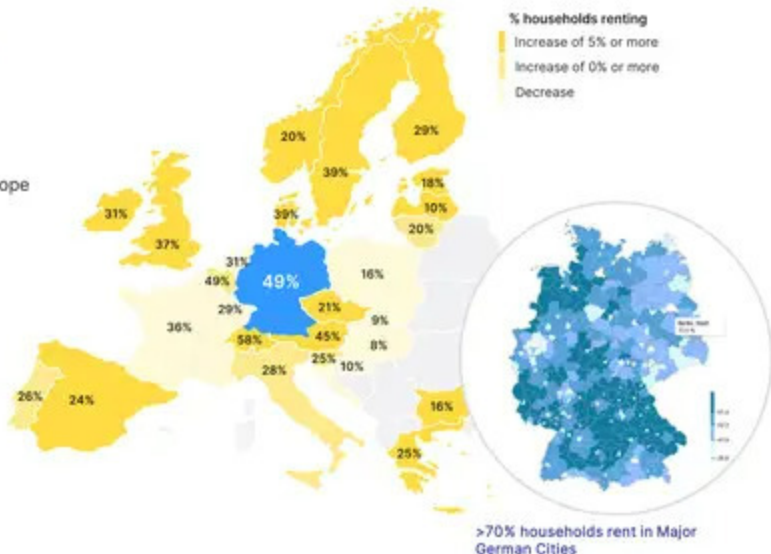

"Generation Rent" Drives Demand Across Europe

175m people renting properties in Europe

- Renting is a **50 year megatrend**
 - **30%** of the household are renting across Europe
 - In urban centres up to **85%** of people rent
- Demand keeps rising as urban populations grow
- Despite increasing prices rental supply remains stagnant
- Only private landlords invest in SUR/SFR
 - Lack of a structured, professional facilitator that accesses consumer transaction supply in order to feed into consumer rental demand

Unprofessional Landlords Offer an Unprofessional Rental Product

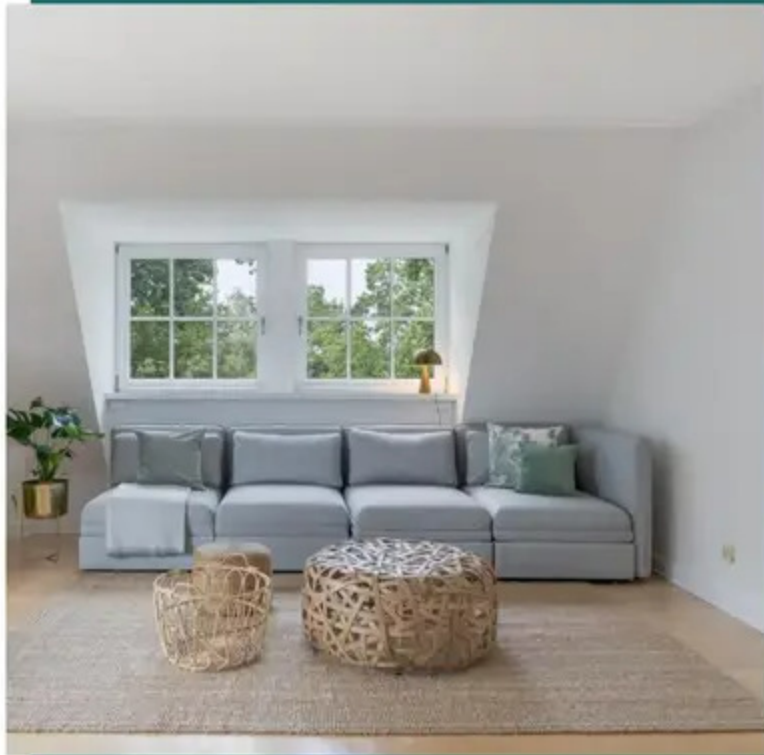

Renters today are faced with:

- Largest monthly expense paid for an unreliable, unbranded and archaic product
- Limited choice & poor-quality assets
- Lack of energy efficient fittings
- Landlords often reluctant to do basic repairs and maintenance
- Broker-controlled, indirect relationship with landlord

IMMO Offering

IMMO is Bridging the Gap in the Residential Value Chain

We iBuy consumer resi at scale directly from home sellers

We transform the assets into beautiful, sustainable homes

We rent them to residents that want a 21st century responsible housing provider

IMMO Performance

We Have Achieved What was Deemed “Impossible”

Since series A funding, IMMO team delivered successful portfolio proof case and unlocked scalable institutional capital

- 1 Aggregated a successful proof case portfolio and developed a quality redefining lettings product
- 2 Built out tech stack and operations to scale sourcing, lettings and management
- 3 Created a highly profitable business model
- 4 Changing the mindset of an immovable industry
- 5 Successfully raised multiple levels of capital to unlock new asset class

Automated and Simplified the Real Estate Service Stack

IMMO is digitising the real estate value chain end to end

Identify undervalued market using risk-adjusted return model

Automatically filter and score leads at scale

Standardised and tech supported in-person inspections

Automated asset underwriting with proprietary algorithm

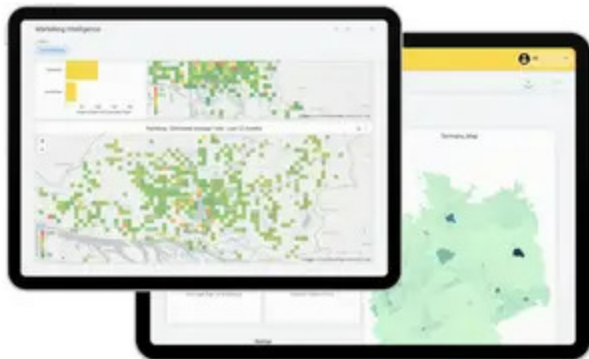

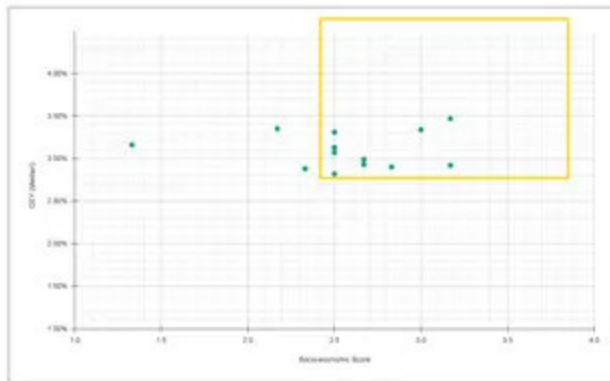

Live, self-service automated portfolio reporting

Identify Undervalued Market Using Risk-Adjusted Return Model

- Analysed tens of thousands of municipalities with our risk-return model for market identification
- Risk-return model considering economical, demographic, liquidity, location and return metrics to identify undervalued markets
- Hyper local market analysis considers millions of data points to identify focus areas
- Hyper local identification of high yielding areas in all German cities, once high-level markets are identified.

Automated Sourcing Engine Enabling Hyper Targeted CSM Outreach

A

Analysis at scale

Billions of Euros in property leads analysed. Leads generated from proprietary D2C, brokers, and listing platforms.

B

Accurate de-duplication

Consolidation and analysis of data sources to gain complete market coverage

C

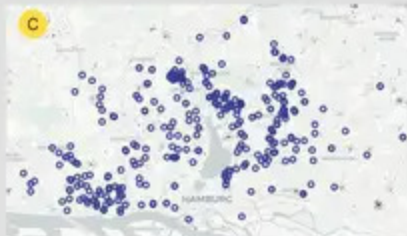

Data enrichment

Location and macro data overlay to advance asset analysis and identify assets in investor criteria

D

Yield estimates

Yields estimated pre-inspection to identify high value investments and assets within investor return criteria

Made Inspections Easy and Data Driven

Inspection app simplifies the property assessment to ultimately allow sellers to self-inspect

Technology managed by
resi experts

300+ data points collected

Human bias removed from
the inspection

Data automatically
processed

Opportunity to automate inspection using AI image recognition models to assess spatial configuration and refurb needs

IMMO Unlocks Existing Resi Stock as Sustainable & Green Solution for Investors and Consumers

"The greenest building is the one that's already built"

IMMO upscales the existing housing supply to help reduce CO2 emissions

- The distribution of embodied CO2 is 7 times higher in a new build vs refurbished asset

Our refurb process introduces meaningful green initiatives

- Materials used comply with energy standards set by industry bodies
- Energy efficient fittings and appliances
- Paint with volatile organic compound (VOC) of 5% or less

Engagement with tenants helps encourage low energy consumption

- Sign-on bonus for tenants who contract with renewable energy provider
- Tenants incentivised to share energy consumption data

Our residential investment clients and suppliers share strong focus on sustainability

Our vision is to be ESG leader in Residential

- Institutional investor demand for ESG qualified and sustainability focused investment solutions is growing immensely
- No investment products available in the market today that combine ESG, low risk and stable yielding assets all in one real estate investment strategy
- IMMO is well positioned to build lead the ESG investment product wave for residential real estate in Europe

Capital invested in ESG in 2020

\$1.7 trillion
in US

50% increase yoy

€151 billion
in Europe

78% increase yoy

\$53 trillion

Global ESG Assets by 2025

A Sustainable Residential Ownership Model for Europe & the World

IMMO helps strengthen the social fabric of an economy

Renting drives inherent social imbalance

- 'Generation rent' has culminated into homeownership levels below 30% in urban centres across Europe
- Vast majority of SUR/SFR rental assets owned by the top tier of the socio economic strata
- Renters miss out on resi individually and collectively as cornerstone of financial wealth generation
 - Investing in resi as individual is difficult
 - Relevant institutions don't have access to SUR/SFR at scale

Making resi part of the social contract

- Institutions that are part of the social contract – pensions funds, annuity providers, life insurers, endowments, charities, etc. – become the backbone of residential asset ownership through IMMO
- Renters pay rent, which generates return that helps pension funds pay pensions, charities address needs, universities provide quality education.
- IMMO creates a Win-Win-Win-Win for Sellers, Tenants, Institutions & Society

Thank you!
